

Question 9

initial energy:-

$$\begin{aligned} & \frac{1}{2} k x^2 \\ &= \frac{1}{2} k (0.011)^2 \\ &= 6.08 \times 10^{-5} \text{ (J)} \end{aligned}$$

$$x = v_0 t$$

$$h = \frac{1}{2} g t^2$$

$$t = \sqrt{\frac{2h}{g}}$$

$$x = v_0 \sqrt{\frac{2h}{g}}$$

$$\begin{aligned} D_1 &= 2.2 - 0.27 \\ &= 1.93 \end{aligned}$$

using ratios:-

$$\frac{v_{02}}{v_{01}} = \frac{D_1}{D_2}$$

$$v_{02} = \frac{D_1}{D_2} v_{01}$$

Equating initial spring energy to kinetic energy:-

$$\frac{1}{2} m v_0^2 = \frac{1}{2} k c^2 \quad (c \text{ is compression})$$

using ratios:-

$$\frac{v_{02}}{v_{01}} = \frac{l_2}{l_1}$$

$$l_2 = \frac{D_1}{D_2} l_1$$

$$= \frac{2.2}{1.93} \times 0.011$$

$$= 0.01253$$

$$\approx 1.25 \text{ cm}$$

is the required compression.
