

Q9.]

Potential energy of spring = K.E of marble

$$V_s = \frac{1}{2} k x^2$$

$$V_s = \frac{1}{2} k x (1.1)^2$$

$$\frac{k x (1.1) x (1.1)}{2}$$

\therefore let, the distance at which the marble falls into the box = $\frac{27}{10} + 2.2 = \boxed{2.47}$

\therefore The Δx final should be 2.47 m

$$\Delta x = 2.47$$

$$\Delta y = 0$$

\therefore Conservation of energy,

$$mgh = \frac{1}{2} mv^2$$

$$\frac{1}{2} k x^2 = \frac{1}{2} mv^2$$

$$\therefore mgh = \frac{1}{2} k x^2$$

\therefore Spring force = $(ma) \rightarrow$ acceleration of marble
